Technical information

The pressure dew point must be at least 15 °C less than ambient and medium temperature and may not exceed 3 °C.

Nominal flow Qn with secondary pressure $p_2 = 6$ bar at $\Delta p = 1$ bar

A change in the flow direction (from air supply on the left to air supply on the right) occurs by rotating installation by 180° about the vertical axis. Please see the operating instructions for further details.

Can be used in circuits with increased efficiency.

The sensor signal is visible on the front of the cover.

Electronic sensor included in scope of delivery (assembled).

An ST6 sensor (contactless) is used to detect the switching position in the non-actuated state (position: exhaust).

The delivered product may vary from that in the illustration.
