

# Filling unit, pneumatically operated, Series AS5-SSU

R412009289

## General series information Series AS5

- The AVENTICS Series AS5 is a modular, versatile maintenance unit for universal application. This Series offers compact dimensions, is highly efficient, lightweight and easy-to-use. The AVENTICS Series AS guarantees reliability, safety, and efficiency with a simplified assembly and maintenance efforts.

## Technical data

Industry  
Industrial

Type  
adjustable filling time

Activation  
Pneumatically

Parts  
3/2-directional valve  
Filling valve

Nominal flow Qn  
8750 l/min

Compressed air connection  
G 1

Working pressure min.  
0 bar

Working pressure max  
16 bar

Connection type  
Pipe connection

Sealing principle  
Soft Seal

Type  
Poppet valve

Pilot  
Internal

Can be assembled into blocks Can be assembled into blocks	Max. particle size 40 µm
Control pressure min. 2.5 bar	Compressed air connection pilot exhaust G 1/8
Control pressure max. 16 bar	Compressed air connection, exhaust G 1/2
Min. ambient temperature -10 °C	Nominal flow Qn 1 to 2 8750 l/min
Max. ambient temperature 50 °C	Nominal flow Qn 2 to 3 3700 l/min
Medium Compressed air Neutral gases	Weight 0.924 kg

## Material

Housing material Polyamide	Material threaded bushing Die cast zinc
Seal material Acrylonitrile butadiene rubber	Part No. R412009289
Material, front cover Acrylonitrile butadiene styrene	

## Technical information

The pressure dew point must be at least 15 °C under ambient and medium temperature and may not exceed 3 °C .

Nominal flow Qn with secondary pressure  $p_2 = 6$  bar at  $\Delta p = 1$  bar

A change in the flow direction (from air supply on the left to air supply on the right) occurs by rotating installation by 180° about the vertical axis. Please see the operating instructions for further details.

The filling valve builds up pressure slowly in the pneumatic systems, i.e. prevents a sudden pressure build-up during a recommissioning after a mains pressure failure or avoids emergency OFF switching. This allows dangerous abrupt cylinder motions to be avoided.

Do not position filling valves or filling units upstream of open consumers, such as nozzles, air barriers, air curtains, since these may prevent through connection of components.

adjustable filling time

With adjustment screw lock

## Dimensions

A1 = input A2 = output A3 = ventilation port A5 = control pressure connection  
1) Adjustment screw for filling time  
2) Adjustment screw lock

## Dimensions in mm

Part No.	A1	A2	A3	A5	B	C	D	E1	F

Part No.	K	M
R412009276	103.5	58
R412009281	103.5	58
R412009289	103.5	58

### Secondary pressure while filling

p1 = Working pressure  
p2 = Secondary pressure  
t = filling time, adjustable via adjustment screw (throttle)  
1) Switching point: adjustable filling time, fixed change-over pressure  $\approx 0.5 \times p_1$  (50%)  
2) Throttle fully opened  
\* Adjustment screw rotations

### Flow rate characteristic, $p_2 = 0,05 - 7$ bar

p1 = Working pressure p2 = Secondary pressure qn = Nominal flow
