Useful load

F = Useful load, Z = Projection

Bending due to 10 N load

F = useful load (at the load center), SF = bending, Z = projection

Bending due to own load

F = useful load (at the load center), SF = bending, Z = projection

Bending due to 10 N load

F = useful load (at the load center), SF = bending, Z = projection

Reduction of useful load for short-stroke

S = stroke

k=correction factor: normal=1, shock loaded=2 With a short stroke, the useful load figures determined from the diagram must be multiplied by the correction factor k. These short-stroke adjustments are already included in the load diagram for a displacement of up to 60 mm.
