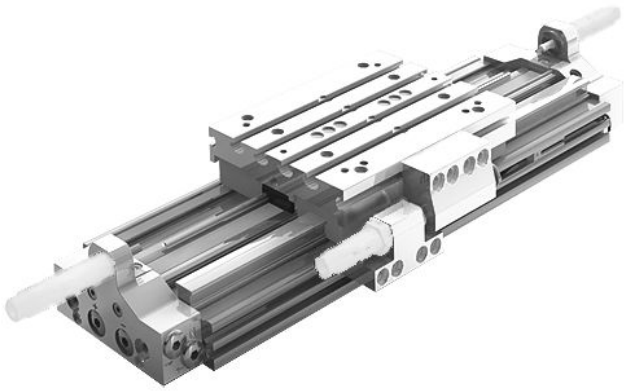
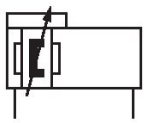
Rodless cylinders, Series CKP-CL

R480163979

AVENTICS Series CKP Rodless cylinders

The AVENTICS Series CKP cylinders provide sturdy, ultra-precise guiding with excellent repeatability and are ideal for applications requiring the movement of heavy loads in space-critical machine environments.





Technical data

Industry	Industrial
Piston Ø	25 mm
Stroke	320 mm
Ports	G 1/8
Functional principle	Double-acting
Magnetic piston	with magnetic piston
Guide	ball rail guide
Easy2Combine	Easy2Combine capable with electrical axes
Piston force	309 N
Pressure for determining piston forces	6,3 bar
Cushioning length	20 mm
Cushioning energy	4 J
Cushioning	Pneumatically
Cushioning	adjustable
Max. speed	2 m/s
Stroke max.	1400 mm
Min. working pressure	3 bar
Max. working pressure	8 bar
Min. ambient temperature	-10 °C

Rodless cylinders, Series CKP-CL

R480163979

Max. ambient temperature	60 °C
~~Min. medium temperature~~	~~-10 °C~~
Max. medium temperature	60 °C
Medium	Compressed air
Max. particle size	5 µm
Weight	5.65 kg

Material

Material front cover	Aluminum
Surface cover	anodized
Seal material	Polyurethane
Material sealing strips	Polyurethane Stainless Steel
Material guide rail	Aluminum
Surface ball rail table	anodized
Material guide rail	Steel, chrome-plated
Surface guide rail	hardened
Part No.	R480163979

Technical information

The pressure dew point must be at least 15 °C less than ambient and medium temperature and may not exceed 3 °C.

The delivered product is lubricated for lifetime.

This product may only be operated with oil-free, dry compressed air.

The pressure dew point must be at least 15 °C less than ambient and medium temperature and may not exceed 3 °C.

The oil content of compressed air must remain constant during the life cycle.

Use only the approved oils from AVENTICS. Further information can be found in the “Technical information” document (available in https://www.emerson.com/en-us/support).

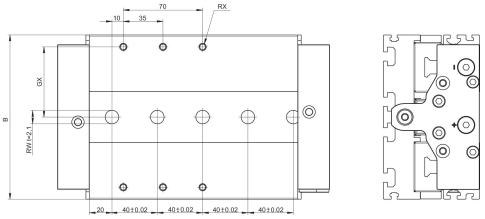
Additional Easy2Combine interface on CKP-CL



Permissible forces Fx, Fy, Fz and torques Mx, My, Mz

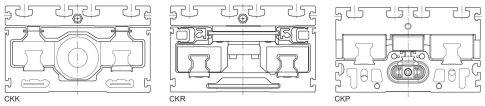
$$\frac{Mx}{Mx_{max.}} + \frac{My}{My_{max.}} + \frac{Mz}{Mz_{max.}} \leq 1$$

With simultaneously moments on the cylinder this equation must be used in addition to the maximum moments check. In the cushioning phase of the movement additional forces occur and must be considered. Please use our calculation tool for rodless cylinders on the http://www.aventics.com.

Rodless cylinders, Series CKP-CL

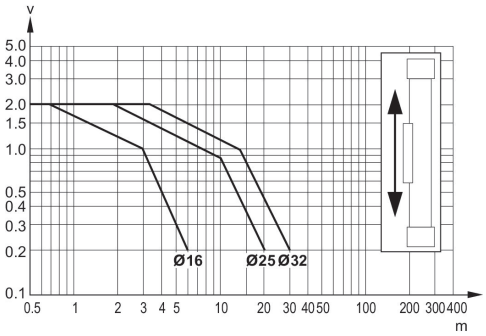
R480163979

CKP is part of the compact module family.



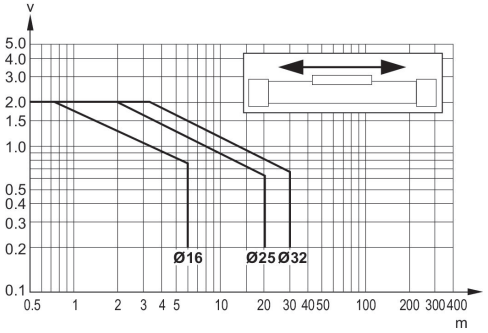
Further information can be found in the operating instructions.

Vertically mounted
with pneumatic cushioning



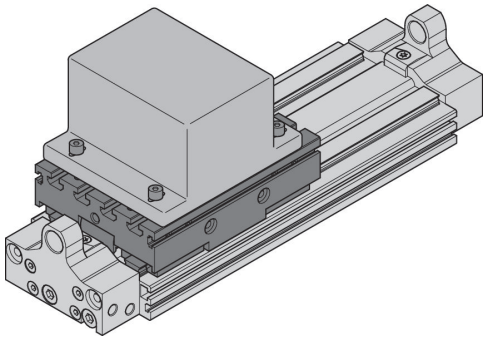
v_t = Piston velocity [m/s] m = Cushionable mass [kg]

Horizontally mounted
with pneumatic cushioning

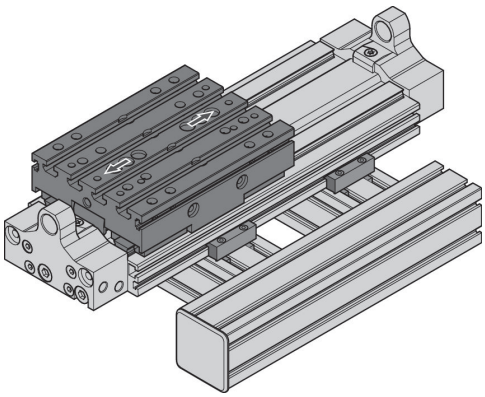


v_t = Piston velocity [m/s] m = Cushionable mass [kg]

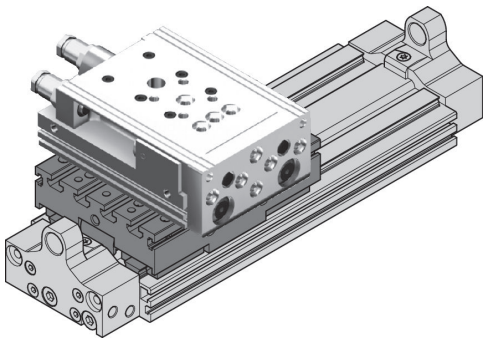
fastening a customer attachment onto the CKP with T-groove nuts.



fastening of CKP on BME (Basic mechanical elements) profile construction via connection plates and clamping fixtures



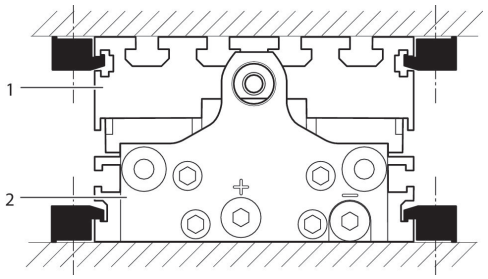
fastening of automation system Easy2Combine to CKP using center rings and T-groove nuts (example: mini slide MSC)



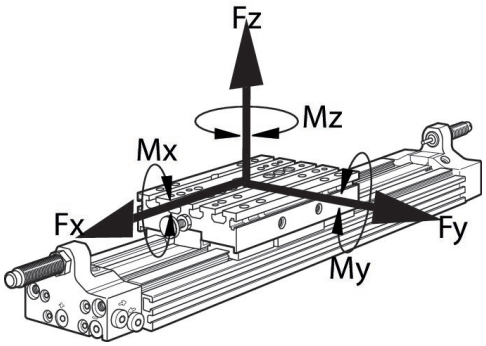
Rodless cylinders, Series CKP-CL

R480163979

fastening of CKP to customer-built mounting base via clamping fixtures



Permissible forces Fx, Fy, Fz and torques Mx, My, Mz



With simultaneously moments on the cylinder this equation must be used in addition to the maximum moments check. In the cushioning phase of the movement additional forces occur and must be considered. Please use our calculation tool for rodless cylinders on the http://www.aventics.com.

Max. dynamic forces and torques
