Technical information

IN port = pressure supply

OUT port – delivers increasing pressure when lever is moved in either direction from "Neutral" (facing lever side of valve).

The min. control pressure must be adhered to, since otherwise faulty switching and valve failure may result!

The pressure dew point must be at least 15 °C less than ambient and medium temperature and may not exceed 3 °C.

The oil content of compressed air must remain constant during the life cycle.

Use only the approved oils from AVENTICS. Further information can be found in the "Technical information" document (available in https://www.emerson.com/en-us/support).

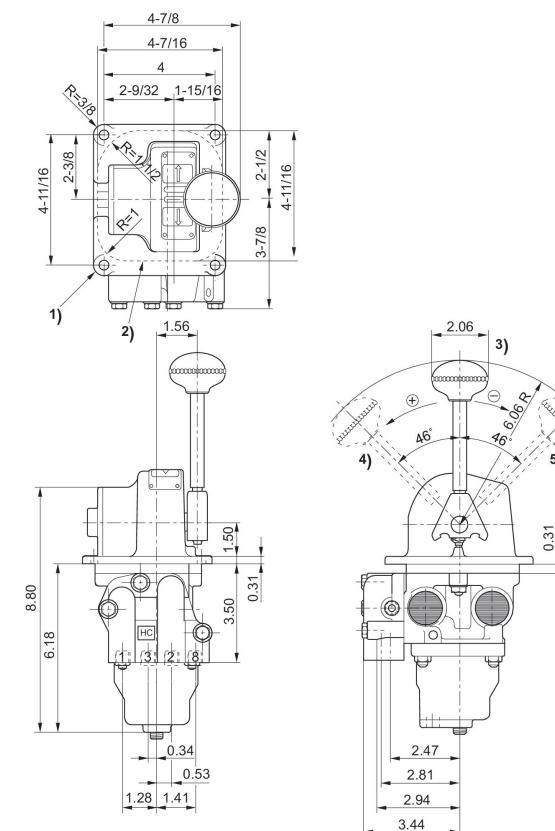

Series H-Controlair®
