Series SV03

AVENTICS dual valves are redundant 3/2 valves for external monitoring that meet the needs and requirements of safe 3/2 valves for the pressurization and exhaust of machines with pneumatic controls in accordance with the ISO 13849-1-2 requirements for safety functions.

Technical data

Industry Industrial Activation Electrically

Switching principle 3/2
Compressed air connection output Ø 13
Operational voltage DC 24 V

Voltage tolerance DC -10 % / +10 %
Actuating control Double Solenoid

Sealing principle Soft seal
Pilot External
Certificates DGUV Test
cCSAus

Standards ISO 13849-1, category 4, performance level: e

(possible)

Return With spring return

Compressed air connection input Ø 13
Compressed air connection, exhaust G 1/2
Power consumption DC 1.5 W
Min. working pressure internal 3 bar
Max. working pressure internal 10 bar
Min. working pressure external 0 bar

R412028207 2024-11-21

Max. working pressure external10 barMin. control pressure3 barMax. control pressure10 barMin. ambient temperature4 °CMax. ambient temperature50 °CMin. medium temperature4 °CMax. medium temperature50 °C

Medium Compressed air

Connector standard EN 175301-803, form C

Nominal flow Qn 1 to 2 1050 l/min Nominal flow Qn 2 to 3 2650 l/min

Protection class with connection **IP65** Duty cycle 100 % Typ. switch-on time 30 ms Typ. switch-off time 70 ms **PNP** Type sensor Electrical connection for sensor Plug Sensor port size M8 Sensor number of poles 3-pin Weight 1.9 kg

Housing material Die-cast aluminum

Seal material Acrylonitrile butadiene rubber

Part No. R412028207

R412028207 2024-11-21

Technical information

Silencer not included in scope of delivery

Directional safety valve series SV is delivered and configured for internal control pressure. It can easily be converted to external control pressure. Please refer to the operating instructions. The control pressure must be > 3 bar.

The min. control pressure must be adhered to, since otherwise faulty switching and valve failure may result!

The pressure dew point must be at least 15 °C less than ambient and medium temperature and may not exceed 3 °C.

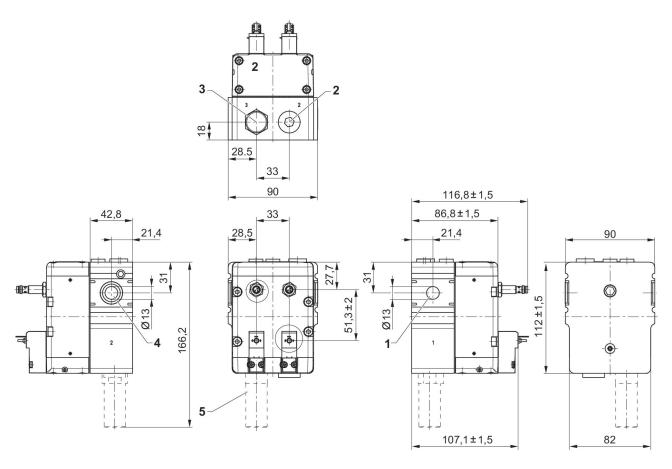

The oil content of compressed air must remain constant during the life cycle.

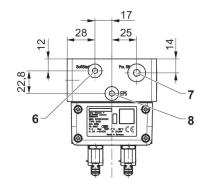

Use only the approved oils from AVENTICS. Further information can be found in the "Technical information" document (available in https://www.emerson.com/en-us/support).

The safety valves are designed in accordance with the requirements listed in ISO 13849-1 and -2. The safety function of the 3/2 safety valve is not only to supply compressed air (pneumatic energy) to the machine/system when the two valve elements are actuated simultaneously, but also to shut off the supply and to exhaust any downstream compressed air when both valves are switched off. A fault in the system where only 1 valve actuates when switching on or only 1 de-actuates when switching off prevents pressurization via port 2 (output) and simultaneously exhausts any air that is already present in port 2 (output). Monitoring of the two proximity sensors by the user's external monitoring system makes it possible to detect these fault situations and to shut off and prevent further electrical energization of the solenoids.

Dimensions

¹⁾ Port 1 (Input)

²⁾ Port 2 (Output)

³⁾ Port 3 (Exhaust)

⁴⁾ Silencer

⁵⁾ Silencer not included in scope of delivery

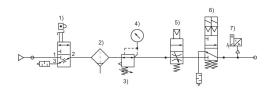

⁶⁾ Connection for soft start with plug G1/8

⁷⁾ Connection for pressure switch with plug G1/4

⁸⁾ Connection for external pilot supply with plug G1/8

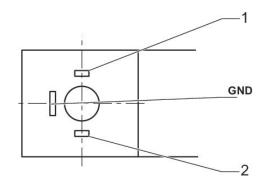

R412028207 2024-11-21

Safe air supply and exhaust valve compatible with soft-start function

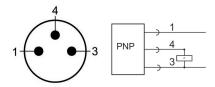

- 1) Lockout valve
- 2) Filter
- 3) Pressure regulator
- 4) Pressure gauge
- 5) Soft-start valve
- 6) Safety exhaust valve SV03-AS2
- Soft-start function
- 7) Pressure Switches

Valve plug connector form C

1) + 24 / 0 VDC 2) 0 / + 24 VDC

PIN assignment sensor, plug M8 3-pin

^{1) + 20 ... + 28} VDC

^{3) 0} VDC
