

Flow sensors SFAW

FESTO

Key features

General

The SFAW is intended to measure and monitor the flow, volume and temperature of liquid media in piping systems or in terminals in industry. The flow velocity is recorded in accordance with the vortex principle. The flow rate and the accumulated volume are calculated from the flow velocity. An optional,

integrated temperature sensor records the temperature of the media. Connection to higher-level systems is provided by 2 switching outputs, an analogue output and/or an IO-Link interface, depending on the type. The outputs can be configured as appropriate to the application.

The switching outputs can be configured to monitor a threshold value or a range. Either PNP or NPN and either normally open (NO) or normally closed (NC) can be set for the outputs. Process values can be read out and parameters changed and transmitted to additional devices via the IO-Link interface.

Application

- Cooling circuit monitoring
- Monitoring for leaks and line breaks
- Process water monitoring
- Filling volume monitoring

Overview

An installation concept with short mounting and dismounting times that is easy to implement in all installation situations.

Mounting

The sensor can be rotated through 360° in the direction of flow, so that once it has been installed it can be aligned without the need for tools.

Dismounting

After the screwed-in locking plate (not shown) has been disconnected, it can be removed. The sensor can then be exchanged quickly by undoing the clamps on the sensor body and removing them. The fluid connections can then be detached from the sensor body.

Display

A large, illuminated LCD display increases the operational safety and makes the displayed values for flow rate or medium temperature and the accumulated volume easy to read. The rotatable display ensures ease of readability and usability when mounted either horizontally or vertically.

Change in colour

Depending on the switching status (e.g. a flow threshold has not been achieved or media temperature exceeded) a change in colour to red can be set in the display for the switching outputs. As a result, it is possible to reliably identify the system status from a large distance or in inaccessible areas.

Media connections

- Free choice of various media connections:
 - Threaded connection (female thread) (G, R)
- Free choice of media connection type on sensor input and sensor output side
- Basic sensor body and media connections can be obtained separately
- Ultra-simple and fast mounting of media connections using clamps
- Option of designing dedicated, application-specific connections

Electronics

Maximum flexibility and reduced warehousing thanks to switchable electrical outputs:

- PNP/NPN
- NC/NO contact function
- Current output 4 ... 20 mA or voltage output 1 ... 5 V, 0 ... 10 V

Sensor signal monitoring

Flow signal monitoring to detect unstable flows. Possible causes for unstable flows include:

- Air in the line
- Line filling during start-up
- Turbulent flows as a result of unfavourable or incorrect installation

Key features

Operation

Monitoring and setting a flow threshold, a flow range, a temperature threshold and a temperature range using a teach-in function or by entering values.

- Flow indication, medium temperature indication, switching outputs and analogue value output for flow rates and temperature can be set on site in one device
- Fast commissioning of the flow sensor thanks to intuitive menu navigation
- Display colour red/blue as visual feedback that the flow rate or temperature thresholds are not met or have been exceeded
- Min./max. value memory for monitoring the flow and temperature (storage of flow and temperature peaks)
- To prevent undesirable switching status changes – an integrated adjustable filter damps the sensor signal generated by flow peaks
- Scaling the analogue output to increase the signal dynamics
- Switchable flow and volume units l/min, l/h, US gal/min, cfm, l, m³, US gal, cft
- Switchable temperature units °C, °F
- ECO function with option to switch off the display
- Optional security code can be freely chosen (4-digit code)
- All settings that have been carried out on one sensor (master) can be transferred (replication) to other, identical sensors (device). This significantly shortens the commissioning time.
- Recorder mode for manual volume measurements with start, stop and reset functionality
- Adjustable volume pulse

IO-Link

- Serial communication integrated using IO-Link 1.1
- Analogue process values are provided digitally
- The sensor can be parameterised and maintained remotely at control level using an IO-Link master
- Automatic parameterisation following a sensor change means there is no need to repeat parameterisation and sensor settings after changing the sensor

Peripherals overview

Mounting components and accessories

		Description	→ Page
[1]	Flow sensor SFAW	For measuring and monitoring flow rate, volume and temperature of liquid media	6
[2]	Clamp SAMH-FW-SB	For mounting the fluid connections on the body of the flow sensors	13
[3]	Locking plate SFAW	For securing the clamps (locking plate is screwed to the sensor body)	–

	None
G	Protective hood

Data sheet

Function
SFAW-...-PNLK-PNVBA

SFAW-...-PNLK-PN-VBA

- Maximum flexibility and reduced warehousing thanks to switchable electrical outputs:
 - PNP/NPN, switchable
 - N/C or N/O contact, switchable
 - Current output 4 ... 20 mA or voltage output 1 ... 5 V, 0 ... 10 V, switchable
- Pulse output for volume measurement can be freely selected
- Measuring signal filter for setting the rise time
- Additional filter for smoothing the display values

General technical data

Certification	RCM c UL us listed (OL)
CE marking (see declaration of conformity) ¹⁾	To EU EMC Directive To EU RoHS Directive
UKCA marking (see declaration of conformity) ¹⁾	To UK instructions for EMC To UK RoHS instructions
Note on materials	RoHS-compliant

1) For information about the area of use, see the declaration of conformity at: www.festo.com/catalogue/... → Support/Downloads.
If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

Input signal, measuring element

	-32	-100
Measured variable	Flow, temperature	
Flow direction	Unidirectional P1 → P2	
Measurement method: flow	Vortex	
Measurement method: temperature	PT1000	
Flow measuring range	[l/min] 1.8 ... 32	5 ... 100
Temperature measuring range	[°C] 0 ... 90	
Operating pressure	[bar] 0 ... 12	
	[MPa] 0 ... 1,2	
	[psi] 0 ... 174	
Note on operating pressure	Max. 1.2 MPa (12 bar / 174 psi) at 40°C	
Max. overload pressure	[bar] 40	
	[MPa] 4	
	[psi] 580	
Operating medium ¹⁾	Liquid media, neutral liquids, water	
Note on the operating/pilot medium	Compatibility of the media with the substances in contact with the media must be ensured	
Temperature of medium	[°C] 0 ... 90	
Ambient temperature	[°C] 0 ... 50	
Nominal temperature	[°C] 23	

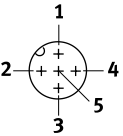

1) Media with a kinematic viscosity ≤ 1.8 mm²/sec. [cSt]. Compatibility of the media with the substances in contact with the media must be ensured.

Data sheet

Electrical data		-32	-100
General output			
Accuracy of zero point Flow \leq 50% FS ¹⁾	[% FS]	± 2	
Accuracy of margin Flow \geq 50% FS ¹⁾	[% FS]	± 3	
Repetition accuracy of zero point Flow \leq 50% FS ²⁾	[% FS]	± 0.5	
Repetition accuracy of spread Flow \geq 50% FS ²⁾	[% FS]	± 1	
Accuracy of temperature	[°C]	± 2	
Temperature coefficient of margin	[% FS]	Typ. $\pm 0.05\%$ FS/K	
Switching output			
Switching output	2 x PNP or 2 x NPN or IO-Link, switchable		
Switching function	Threshold value comparator or window comparator, freely programmable		
Switching element function	N/C contact or N/O contact, switchable		
Switch-on time	[ms]	400 with filter time constant 150 ms (adjustable)	
Switch-off time	[ms]	300 with filter time constant 150 ms (adjustable)	
Max. output current	[mA]	100	
Voltage drop	[V]	Max. 1.5	
Pull-down / pull-up resistor	PNP: integrated; NPN: not integrated		
Inductive protective circuit	Available		
Analogue output			
Characteristic flow rate curve	[l/min]	0 ... 32	0 ... 100
Characteristic curve for temperature	[°C]	0 ... 100	
Output characteristic curve for current	[mA]	4 ... 20	
Output characteristic curve for voltage	[V]	0 ... 10 or 1 ... 5, adjustable	
Rise time	[ms]	900 with filter time constant 150 ms (adjustable)	
Max. load resistance at current output	[ohm]	500	
Min. load resistance of voltage output	[kOhm]	15	
Output, additional data			
Short circuit current rating	Yes		
Overload protection	Available		
Electronics			
Operating voltage range DC	[V]	18 ... 30	
Max. current consumption	[mA]	260	
Reverse polarity protection	For all electrical connections		
Electromechanical systems			
Electrical connection			
Function	Analogue output		
	IO-Link		
	Switching output		
	Power supply		
Connection type	Plug		
Connection technology	M12x1, codificación A según EN 61076-2-101		
Number of pins/wires	5		
Type of mounting	Screw-type lock		
Max. cable length	[m]	30, for IO-Link operation 20	

1) Accuracy of flow rate value = $\pm 2\%$ FS for flow rate $\leq 50\%$ FS and $\pm 3\%$ of measured value for flow rate $\geq 50\%$ FS2) Repetition accuracy of flow rate = $< \pm 0.5\%$ FS for flow rate $\leq 50\%$ FS $< \pm 1\%$ of measured value for flow rate $\geq 50\%$ FS
