### Instruction for installation

Slim & Flat

- ① Slim model = light emission on narrow side
- ② Flat model = light emission on broad side

Minimum distance to reflective materials

Depending on the sensing range, make sure that there are no reflective objects in the field of view of the light grid pair

- ① Minimum distance (safe)
- ② Minimum distance (typical)

Minimum distance between 2 light grids

If not installed in opposition, make sure the minimum distance between the two light grid pairs is adhered to

- ① Minimum distance (safe)
- ② Minimum distance (typical)

Detection capability

Minimum object width (MOW)

$d_{LG}$  = Installed working distance between sender and receiver  
 $d$  = Distance to sender or receiver related to the installed working distance

Minimum detectable object (MDO)

$d_{LG}$  = Installed working distance between sender and receiver  
 $d$  = Distance to sender or receiver related to the installed working distance

Functional principle

Optical synchronization

The transmitter and receiver synchronize optically, so no electrical connection is required. For this reason, either the first or the last beam of the automation light grid must remain unobstructed. If both beams are interrupted, measurement is no longer possible.

- ① Optical synchronization
- ② Detection height
- ③ Beam separation
- ④ Scanning range
