Absolute measurement accuracy and repeatability, working distance: radial

The specified numerical values are typical values and apply in the central 80% of the detection area, at room temperature, without ambient light, and at a frame rate of 25 fps. At distances  $> 9$  m, the reliability of the measured values will be lower and individual pixels or pixel groups may exhibit defective measured values. The measurement accuracy may degrade by up to  $\pm 10$  mm (typically  $\pm 5$  mm) over the entire ambient operating temperature.
