## Datasheet

### Gripping force F per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm x and eccentricity a and b

$$x = \sqrt{a^2 + b^2} = \sqrt{40^2 + 45^2} = 60 \text{ mm}$$

The formula (on the left) must be used to calculate the lever arm x with eccentric gripping.  
The gripping force F can then be read from the graphs using the calculated value x.

Calculation example:

Assuming:

Distance a = 40 mm

Distance b = 45 mm

To be determined:

The gripping force at 6 bar, with a DHPL-25-50-P-A used as an external gripper.

### Gripping force F per gripper jaw at 0.6 MPa (6 bar, 87 psi) as a function of lever arm x and eccentricity a and b

The graph gives a value of F = 160 N for the gripping force.
