

## Spindle axes EGC-BS-KF, with recirculating ball bearing guide

**FESTO**

Festo core product range  
Covers 80% of your automation tasks

Worldwide:

Always in stock

Superb:

Festo quality at an attractive price

Easy:

Simplified procurement and warehousing

★ Generally ready for shipping ex works in 24 hours

In stock at 13 Service Centres worldwide

More than 2200 products

★ Generally ready for shipping ex works in 5 days

Assembled for you at 4 Service Centres worldwide

Up to  $6 \times 10^{12}$  variants per product family

Just look  
for the  
star!

Overview of toothed belt and spindle axes

Toothed belt axes

- Speeds of up to 10 m/s
- Acceleration of up to 50 m/s<sup>2</sup>
- Repetition accuracy of up to ±0.08 mm
- Strokes of up to 8500 mm (longer strokes on request)
- Flexible motor mountings

Spindle axes

- Speeds of up to 2 m/s
- Acceleration of up to 20 m/s<sup>2</sup>
- Repetition accuracy of up to ±0.003 mm
- Strokes of up to 3000 mm

Coordinate system

Toothed belt axes

Type	F <sub>x</sub> [N]	v [m/s]	M <sub>x</sub> [Nm]	M <sub>y</sub> [Nm]	M <sub>z</sub> [Nm]	Characteristics

## Key features

### At a glance

#### Powerful

- Generously sized profiles with an optimised cross section enable maximum rigidity and load capacity
- Speed, acceleration and torque resistance set a new standard

#### Economical

- In addition to its technical data, the spindle axis also offers an excellent price/performance ratio
- Due to the EGC's high performance it is often possible to use a smaller size

#### Versatile

- Different spindle pitches, numerous sizes and variants such as protected guides open up a broad range of applications
- Space-saving position sensing possible via proximity switch in the profile slot
- Wide range of options for mounting on drives
- Comprehensive range of mounting accessories for multi-axis combinations
- Spindle support enables maximum travel speed with all stroke lengths

### Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant data sheet in the catalogue.

Design	Size	Working stroke [mm]	Speed [m/s]	Repetition accuracy [mm]	Max. feed force [N]	Guide characteristics				
						Forces and torques				
						Fy [N]	Fz [N]	Mx [Nm]	My [Nm]	Mz [Nm]
<b>Recirculating ball bearing guide</b>										
	70	50 ... 1000	0.5	±0.02	400	1850	1850	16	132	132
	80	50 ... 2000	1.0	±0.02	650	3050	3050	36	228	228
	120	50 ... 2500	1.5	±0.02	1500	6890	6890	144	680	680
	185	50 ... 3000	2.0	±0.02	3000	15200	15200	529	1820	1820

## Key features

### Slide variants

Standard slide

Extended slide

Additional slide

### Guide options

Protected version

- The protected guide cleans the guide rail while the additional wiper seal protects the recirculating ball bearing guide

With central lubrication

→ Page 25

- The lubrication adapter enables the guide and the spindle to be permanently lubricated using semi or fully automatic relubrication devices
- The adapters are suitable for oils and greases
- All lubrication connections must be connected

Displacement encoder

→ Page 14

- The position of the slide can be sensed directly when using the incremental displacement encoder. This means that all elasticities of the drivetrain can be detected and corrected by the motor controller.

Clamping unit

→ Page 15

- 1- or 2-channel design, for holding loads
- Reliable holding is guaranteed since the forces act directly on the slide
- A limited number of emergency braking operations are permissible with sizes 120 and 185

## Key features

### Complete system comprising spindle axis, motor, motor controller and motor mounting kit

Spindle axis with recirculating ball bearing guide

#### Motor

→ Page 52

Servo motor:  
EMMT-AS, EMME-AS  
Stepper motor:  
EMMS-ST

-  - **Note**

A range of specially adapted complete solutions is available for the spindle axis EGC and the motors.

#### Servo drives

Servo drive:  
CMMT-AS  
Servo drive for extra-low voltage:  
CMMT-ST

#### Motor mounting kit

Axial kit → Page 52

Parallel kit → page 56

Peripherals overview

## Peripherals overview

Variants and accessories			
Type/order code	Description		→ Page/Internet
[1] Spindle axis EGC-BS-KF	Electric drive		10
[2] Emergency buffer with retaining bracket A	For avoiding damage at the end stop in the event of a malfunction		65
[3] Centring pin/sleeve ZBS, ZBH	<ul style="list-style-type: none"> <li>For centring loads and attachments on the slide</li> <li>Included in the scope of delivery: <ul style="list-style-type: none"> <li>With size 70: 2x ZBS-5</li> <li>With size 80, 120, 185: 2x ZBH-9</li> </ul> </li> </ul>		65
[4] Clamping unit 1H...PN, 2H-PN	For holding loads		15
[5] Switch lug X, Z, O, P, W, R	For sensing the slide position		63
[6] Sensor bracket O, P, W, R	Adapter for mounting the inductive proximity switches (round design) on the axis		64
[7] Proximity switch, M8 O, P, W, R	<ul style="list-style-type: none"> <li>Inductive proximity switch, round design</li> <li>The order code O, P, W, R includes 1 switch lug and max. 2 sensor brackets in the scope of delivery</li> </ul>		66
[8] Foot mounting F	For mounting the axis on the end cap (only possible at one end)		58
[9] Slot cover B, S	<ul style="list-style-type: none"> <li>For protection against contamination</li> </ul>		65
[10] Proximity switch, T-slot X, Z	<ul style="list-style-type: none"> <li>Inductive proximity switch, for T-slot</li> <li>The order code X, Z includes 1 switch lug in the scope of delivery</li> </ul>		66
[11] Connecting cable V	For proximity switch (order code W and R)		67
[12] Clip CL	For mounting the proximity switch cable in the slot		65
[13] Slot nut Y	For mounting attachments		65
[14] Adapter kit DHAM	For mounting the support profile on the axis		66
[15] Support profile HMIA	For mounting and guiding an energy chain		66
[16] Profile mounting M	For mounting the axis on the side of the profile		59
[17] Adjusting kit EADC-E16	For mounting the axis on a vertical surface. Once mounted, the axis can be aligned horizontally		62
[18] Central support EAHF-L5	For mounting the axis on the profile from underneath		60
[19] Adjusting kit EADC-E15	Height-adjustable. Can be used to easily compensate for any unevenness in the bearing surface		61
[20] Motor EMME, EMMS	Motors specially matched to the axis, with or without brake		52
[21] Parallel kit EAMM-U	For parallel motor mounting (comprising: housing, clamping sleeve, toothed belt pulley, toothed belt)		56
[22]/ [23] Axial kit EAMM-A	For axial motor mounting (comprising: coupling, coupling housing and motor flange)		52
[24] Motor EMME, EMMS	Motors specially matched to the axis, with or without brake		52
- Guide axis EGC-FA	Axis without drive		egc-fa

Spindle pitch [mm/rev]	10	10	20	10	25	40
$J_0$						
EGC-...-GK [kg mm <sup>2</sup> ]	1.99	5.2	5.2	64.46	64.46	594
EGC-...-GV [kg mm <sup>2</sup> ]	3.41	8.67	8.68	92	92	774.71
$J_H$ per metre stroke [kg mm <sup>2</sup> /m]	14.2	34.6	34.6	275.6	275.6	1803.1
$J_L$ per kg payload [kg mm <sup>2</sup> /kg]	2.53	2.53	10.13	2.53	15.83	40.53
$J_W$ slide						
EGC-...-GK [kg mm <sup>2</sup> ]	1.04	1.86	7.46	6.09	38.06	348.87
EGC-...-GV [kg mm <sup>2</sup> ]	1.48	2.34	9.35	7.34	45.85	399.08
$J_F$ Clamping unit						
EGC-...-1H...-PN [kg mm <sup>2</sup> ]	-	1.78	7.1	5.8	36.4	198.5
EGC-...-2H-PN [kg mm <sup>2</sup> ]	-	3.3	13.2	10	63.3	336.4

The mass moment of inertia  $J_A$  of the entire axis is calculated as follows:

$$J_A = J_0 + \sum J_W + J_H \times \text{working stroke [m]} + J_L \times m_{\text{payload [kg]}} + J_F$$

$\sum J_W$  = Total mass moment of inertia of all slides, including the first slide

Max. travel speed with displacement encoder	4	4
Encoder signal	5 V TTL; A/A, B/B; reference signal (N/N) cyclically every 5 mm (zero pulse)	
Signal output	Line driver, alternating, resistant to sustained short circuit	
Electrical connection	8-pin plug, round design, M12	
Cable length	160	

### Operating and environmental conditions – Displacement encoder system

Ambient temperature	–10 ... +70
Degree of protection	IP64
CE marking (see declaration of conformity)	To EU EMC Directive <sup>1)</sup>

1) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

### Application information

- The displacement encoder contains paint-wetting impairment substances.
- The spindle axis with displacement encoder is not designed for the following application examples:

- Magnetic field

- Welding application

The axis can only be relubricated with the lubrication adapter (EGC-...-C) when used in combination with the clamping unit.

## Data sheet

### Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

#### Max. permissible forces and torques for a service life of 5000 km

Size		70	80	120	185
$F_{y\max.}$	[N]	1850	3050	6890	15200
$F_{z\max.}$	[N]	1850	3050	6890	15200

$M_{y\max.}/M_{z\max.}$					
EGC-...-GV/-GQ	[Nm]	132	228	680	1820

#### Basic load ratings

Size		70	80	120	185		
Spindle pitch	[mm/rev]	10	10	20	25	40	
<b>Ball screw drive</b>							
Dynamic $c_{\text{dyn,BSD}}$	[N]	4000	6800	5700	14100	12700	25000

#### Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of  $f_v \leq 1$ , based on the maximum permissible forces and torques for a service life of 5000 km.

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$F_1/M_1$  = dynamic value

$F_2/M_2$  = maximum value

## Data sheet

### Service life of the guide

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor  $f_v$  against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor  $f_v$  greater than 1.5.

#### Load comparison factor $f_v$ as a function of service life

Example:

A user wants to move an X kg load. Using the formula (→ page 16) gives a value of 1.5 for the load comparison factor  $f_v$ . According to the graph, the guide would have a service life of approx. 1500 km. Reducing the acceleration reduces the  $M_z$  and  $M_y$  values. A load comparison factor  $f_v$  of 1 now gives a service life of 5000 km.

#### Note

Engineering software  
Electric Motion Sizing  
[www.festo.com/x/electric-motion-sizing](http://www.festo.com/x/electric-motion-sizing)

The engineering software can be used to calculate the guide workload for a service life of 5000 km.

$f_v > 1.5$  are only theoretical comparison values for the recirculating ball bearing guide.

### Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km to ISO or 50 km to JIS. As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes EGC with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

#### Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size		70	80	120	185
$F_{y_{max}}$	[N]	6815	11236	25383	55997

## Data sheet

### Service life of the spindle

- The service life of the spindle axis depends on the service life of the guide (→ page 17) and of the ball screw. The operating coefficient plays a considerable role in determining the possible service life. it can be determined with the help of the table (→ page 19)
- The service life ends when the maximum number of switching cycles or maximum running performance has been reached:
  - 5 million switching cycles or 5000 km running performance
- The distance between the foremost and rearmost positions must be at least 2.5 times the spindle pitch per travel cycle
- The specifications for running performance are based on experimentally determined and theoretically calculated data (at room temperature). The running performance that can be achieved in practice can deviate considerably from the specified curves under different parameters

### Calculation of the mean feed force $F_{xm}$ with ball screw

$$F_{xm} = \sqrt[3]{\frac{F_{x1}^3 \cdot s_1 + \dots + F_n^3 \cdot s_n}{s_1 + \dots + s_n}}$$

- $F_{xm}$  = Mean feed force
- $F_{x1/n}$  = Feed force of section
- $s_{1/n}$  = Part of movement cycle that is travel

### Mean feed force $F_{xm}$ as a function of running performance L, with an operating coefficient $f_B$ of 1.0, at room temperature

## Data sheet

### Stroke reserve

Stroke length	Stroke reserve					
The selected stroke corresponds in principle to the required working stroke. The variants GK/GV do not have a wiper seal on the guide. These variants therefore have an additional safety distance between the drive cover and slide that is not designated as part of the working stroke.	A safety distance (similar to GK/GV) between the drive cap and slide can be defined for the variants GP/GQ and GK-C/GV-C using the modular product system via the "stroke reserve" feature. With the variants GK/GV, the stroke reserve and safety distance are added for each end position.					
	<ul style="list-style-type: none"> <li>The stroke reserve length can be freely selected</li> <li>The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke</li> </ul>					
	<b>Example:</b> EGC-70-500-BS-10P-KF-20H-... Working stroke = 500 mm 2x stroke reserve = 40 mm Total stroke = 540 mm (540 mm = 500 mm + 2x 20 mm)					

Size	70	80		120		185
Spindle pitch [mm/rev]	10	10	20	10	25	40
L9 = safety distance with GK/GV (per end position) [mm]	10.5	13	13	18	18	21

### Working stroke reduction

With standard slide GK/GP / extended slide GV/GQ with additional slide KL/KR

- The working stroke is reduced by the length of the additional slide and the distance between both slides
- If the variant GP/GQ is ordered, the additional slide is also protected
- If the variant GV/GQ is ordered, the additional slide is not extended
- If the variant GK-C/GV-C is ordered, the additional slide is also supplied with lubrication adapters

L17 = Slide length  
 L17 = Additional slide length

L = Distance between the two slides  
 [1] Additional slide

### Example:

Type EGC-70-500-BS-...-GK-KL/KR

Working stroke without additional slide = 500 mm  
 L = 20 mm  
 L17 = 100 mm

Working stroke with additional slide = 380 mm  
 (500 mm - 20 mm - 100 mm)

## Data sheet

### Maximum permissible support spacing L (without profile mounting MUE/central support EAHF) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.

The following graphs can be used to determine the maximum permissible support span l as a function of force F acting on the axis. The deflection is  $f = 0.5 \text{ mm}$ .

Force  $F_y$

- EGC-70
- ⋯ EGC-80
- - - EGC-120
- · - EGC-185

Force  $F_z$

### Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functionality of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
70 ... 185	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

## Data sheet

### Central lubrication

The lubrication adapters enable the guide and the spindle of the spindle axis EGC-BS to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

- For size 70, 80, 120, 185
- The modules are suitable for oils and greases.
- The dimensions of the spindle axis EGC-BS are the same with and without central lubrication modules.
- All lubrication connections must be connected
- There are three connection options on each side
- Can be used in combination with:
  - Standard slide GK
  - Additional slide KL, KR
- Cannot be used in combination with:
  - Protected recirculating ball bearing guide GP

Additional dimensions → page 37

### Design of a central lubrication system

A central lubrication system requires various additional components. The illustration shows different options (using a hand pump, pneumatic container pump or electric container pump) required as a minimum for designing a central lubrication system. Festo does not sell these additional components; however, they can be obtained from the following companies:

- Lincoln
- Bielomatik
- SKF (Vogel)

Festo recommends these companies because they can supply all the necessary components.

[1] Hand pump

[2] Pneumatic container pump

[3] Electric container pump

[4] Manually operated container pump

[5] Nipple block

[6] Distributor block

[7] Tubing or piping

[8] Fittings

Guide		Recirculating ball bearing guide					<b>-KF</b>	-KF	
Stroke reserve	[mm]	0 ... 999 (0 = no stroke reserve)				[2]	<b>-...H</b>		
Motor attachment position		Motor on left					<b>-ML</b>		
		Motor on right					<b>-MR</b>		
Slide		Standard slide					<b>-GK</b>		
		Extended slide, protected				-	<b>-GQ</b>		
		Standard slide, protected				-	<b>-GP</b>		
		Extended slide					<b>-GV</b>		

[1] S Only available at or above the specified strokes

1) In combination with slide GK, GP

2) In combination with slide GQ, GV

[2] ...H The sum of nominal stroke and 2x stroke reserve must not exceed the maximum stroke length

 **Note**

Spindle support enables maximum travel speed with all stroke lengths

## Ordering data – Modular product system

Cable clip		10, 20, 30, 40, 50, 60, 70, 80, 90					...CL	

- [3] KL, KR  
If the protected slide variant (GQ, GP) is selected, the additional slide (KL, KR) is also protected  
If the extended slide variant (GQ, GV) is selected, the additional slide (KL, KR) is not extended  
If the slide with lubrication adapter (GK-C, GV-C) is selected, the additional slide (KL, KR) is also supplied with lubrication adapter  
Working stroke reduction in combination with additional slide (KL, KR) → page 22
- [4] C  
Not with standard slide, protected GP and extended slide, protected GQ
- [5] 1HL, 1HR, 2H  
Not with slide GQ, GV nor with additional slide KL, KR  
Only with PN  
Working stroke reduction in combination with clamping unit (1HL, 1HR, 2H) → page 23
- [6] ... A  
Emergency buffer with retaining bracket A cannot be combined with slide GP, GQ, GK-C, GV-C and clamping unit 1H...PN, 2H-PN

**Note**

The code X, Z includes a switch lug in the scope of delivery.

The code O, P, W, R includes one switch lug and max. two sensor brackets in the scope of delivery.

## Accessories

 **Note**

Depending on the combination of motor and drive, it may not be possible to reach the maximum feed force of the drive.

When using parallel kits, the no-load driving torque of the particular kit must be taken into consideration.

**Permissible axis/motor combinations with axial kit**

<b>With stepper motor and gear unit</b>			
EMMS-ST-87-... EMGA-80-P-...	1589544	EAMM-U-110-S95-80G-207	

1) The input torque must not exceed the max. permissible transferable torque of the parallel kit.

2) Gear unit output shaft diameter: EMGA-60-P-...SAS/SST: 11 mm; EMGA-60-P-...EAS, EMGC-60-P: 14 mm

 **Note**  
The clamping element EADT is required to adjust the toothed belt pretension with EAMM-U-110 and EAMM-U-145.

## Accessories

### Mounting options between axis and support profile

Depending on the adapter kit, the spacing between the axis and the support profile is:  
 $x = 20 \text{ mm}$  or  $50 \text{ mm}$

The support profile must be mounted using at least 2 adapter kits. For longer strokes, an adapter kit must be used every 500 mm.

Example
