

Feed separators HPV

FESTO

Key features

Separation of workpieces in the feed process

Previously

- At least 2 drives, 2 valves and 4 proximity sensors
- Extensive programming

Now

- One unit (1 drive, 1 valve and 2 proximity sensors)
- Cheaper
- Reliable
- No programming required

High functionality

- [1] Corrosion-resistant thanks to stainless steel plungers
- [2] Optimum and precise adaptation options using centring sleeves
- [3] Supply ports optionally at top or rear
- [4] Proximity sensors suitable for integration in the housing can be used (type SME/SMT-8)

Note
An integrated mechanical interlock between the two plungers ensures that one plunger cannot retract until the other has advanced. Both plungers are briefly extended during switching and the part to be separated is enclosed.

Operating principle

Plunger A is retracted. The locking mechanism locks plunger B.

Plunger A advances.

The locking mechanism prevents plunger B from retracting until plunger A is fully advanced.

Plunger B advances.

The locking mechanism prevents plunger A from retracting until plunger B is fully advanced.

Note on materials		Copper/PTFE-free
		RoHS-compliant

Note

The plunger slideways in the housing are determined by choosing the appropriate fit, and cannot be adjusted. The necessary basic lubrication is applied during assembly. We recommend that the feed separator be re-lubricated after 2 million cycles.

1) If the max. permissible weights of the add-on plunger separators are exceeded, the retracting and advancing times must be adapted in accordance with the table below using one-way flow control valves. Failure to do so may result in components of the feed separator being damaged.
